

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-22 (cancelled)

Claim 23 (currently amended): A method comprising:
receiving a communication from a sender, the communication
including an audio message and sender identification
information;
storing the audio message;
searching publicly available remote data for correlated
information related to the sender, using the sender
identification information; and
storing the correlated information.

Claim 24 (previously presented): A method as defined in
Claim 23, further comprising:
encoding the audio message;
composing an email message that includes the encoded audio
message; and
transmitting the email message to a predetermined email
address.

Claim 25 (previously presented): A method as defined in
Claim 23, further comprising:
constructing a message interface web page; and
receiving a request for the message interface web page.

Claim 26 (previously presented): A method as defined in Claim 25, wherein the message interface web page is constructed using data derived from the communication.

Claim 27 (previously presented): A method as defined in Claim 26, wherein the data comprises the correlated information.

Claim 28 (previously presented): A method as defined in Claim 26, where the message interface web page comprises a hyperlink that enables a user to request the message interface web page.

Claim 29 (previously presented): A method as defined in Claim 26, further comprising:
sending the message interface web page to a remote client.

Claim 30 (previously presented): A method as defined in Claim 26, further comprising:
sending the message interface web page to a local
presentation interface.

Claim 31 (currently amended): An apparatus comprising:
a telephone mechanism to connect to a network and to
receive a communication from a sender, the
communication including an audio message and sender
identification information;
memory to store the audio message; and
a search director to search one or more publicly available
remote sources of information, using the sender
identification information, for correlated information
related to the sender; and
memory to store the correlated information.

Claim 32 (previously presented): An apparatus as defined in Claim 31, further comprising:

- an encoder to encode the audio message;
- a composer to compose an email message that includes the encoded audio message; and
- a client to transmit the email message to a predetermined email address.

Claim 33 (previously presented): An apparatus as defined in Claim 32, further comprising:

- a local presentation interface to display a message interface web page.

Claim 34 (previously presented): An apparatus as defined in Claim 32, further comprising:

- an audio player.

Claim 35 (currently amended): An article storing instructions that, if executed, enable a system to:

- receive a communication from a sender, the communication including an audio message and sender identification information;
- store the audio message;
- search, using the sender identification information, publicly available remote database for correlated information related to the sender; and
- store the correlated information.

Claim 36 (previously presented): An article as defined in Claim 35, storing instructions, that if executed, enable the system to:

encode the audio message;
compose an email message that includes the encoded audio
message; and
transmit the email message to a predetermined email
address.

Claim 37 (previously presented): An article as defined in
Claim 35, storing instructions that, if executed, enable the
system to:

construct a message interface web page; and
receive a request for the message interface web page.

Claim 38 (previously presented): An article as defined in
Claim 37, wherein the message interface web page is constructed
using data derived from the communication.

Claim 39 (previously presented): An article as defined in
Claim 38, wherein the data comprises the correlated information.

Claim 40 (previously presented): An article as defined in
Claim 38, wherein the message interface web page comprises a
hyperlink that enables a user to make requests for the message
interface web page.

Claim 41 (previously presented): An article as defined in
Claim 38, storing instructions, that if executed, enable the
system to:

send the message interface web page to a remote client.

Claim 42 (previously presented): An article as defined in
Claim 38, storing instructions, that if executed, enable the
system to:

send the message interface web page to a local presentation interface.
